- Tran Quang Khai, Son Tra District, Da Nang City

Skills

Front-end
HTML, CSS, JavaScript (ES6+),
TypeScript, React.js, Vue.js

Back-end
Node.js , Express.js, Laravel

Database
MongoDB, PostgreSQL, Supabase,
MySQL

Version Control
Git, GitHub, GitLab

Tools
PostMan, XAMPP, DBeaver, Docker

Certifications

05/2026
TOEIC Listening & Reading – 550

Honors & Awards

05/2025
Second Prize – Student Scientific
Research Duy Tan University

Objective

Aspiring Full-stack Developer with practical experience in React.js, Node.js, and modern web technologies through internships and team projects. Skilled in developing end-to-end web applications, integrating AI services, and building secure, scalable systems. Seeking an opportunity to contribute, grow professionally, and deliver meaningful solutions in a collaborative development environment.

Education

Major: Software Engineer 08/2022 - 06/2026
Duy Tan University
GPA: 3.69/4

Work experience

Intern Full-stack Developer 01/2026 - 05/2026
D-Soft Joint Stock Company

- Developed and maintained web application features using Vue.js and Laravel.
- Refactored reusable components and optimized API calls, reducing duplicated code by approximately 25% and improving page load performance by around 30%.
- Collaborated in Agile development using Git/GitHub to deliver features, fix bugs and participate in daily progress reporting.

Projects

Full-stack Developer 10/2025 - 12/2025
Digital Caregiver
Project Description
A platform that helps caregivers monitor elderly users, manage daily medication schedules, receive urgent alerts and provide AI-assisted health support.
Live Demo: https://digital-caregiver-smoky.vercel.app
Team size - 4
Role - Full-stack Developer
Technology: React.js, Tailwind CSS, shadcn/Radix UI, Node.js, Express.js, MongoDB, Supabase, JWT, Socket.IO, Docker, Beeknoee/OpenAI-compatible API, node-cron, PWA
Key Responsibilities & Contributions

- Caregiver-Elderly Pairing: Developed a secure pairing flow that connects caregiver and elderly accounts using time-limited PIN codes.
- Authentication & Security: Implemented Firebase Google login, JWT access/refresh tokens, protected routes and role-based authorization.
- Real-time Health Alerts: Developed Socket.IO medication reminders, missed-dose notifications and SOS geolocation alerts for emergency support.
- AI Care Features: Integrated Claude Sonnet with Supabase vector storage and text embeddings to provide context-aware health assistance and medication guidance.

Full-stack Developer 03/2026 - 05/2026
Smart Travel AI
Project Description
Smart Travel is an AI-powered travel platform that helps users plan personalized trips and manage their tour experience from booking to real-time tracking.
Live demo: https://traveon.id.vn
Team size - 5
Role - Full-stack Developer
Technology: React.js, Tailwind CSS, shadcn/Radix UI, Node.js, Express.js, MongoDB, Supabase, JWT, Socket.IO, Beeknoee/OpenAI-compatible API
Key Responsibilities & Contributions

- AI Tour Request Workflow: Built the traveler-to-provider AI tour request flow with provider claiming, service matching, and proposal approval.
- AI Trip Planner: Built an AI itinerary planner that generates personalized travel plans based on destination, budget, duration, and traveler count.
- AI Chatbot Assistant: Integrated an AI chatbot using Gemini, MongoDB lookup, and Knowledge Base search to answer tour, booking, payment, and policy questions.
- Booking, Payment & Tracking: Implemented tour booking, PayOS payment flow, payment status sync, booking history, and live tour tracking links.
